

TM639 Decorator Slip Trailer

TM639 Slip Trailing Bottle with three tip sizes can reduce glazing time significantly when used properly. The fine tips are useful for trailing oxides and glaze techniques such as Cuerda Seca. Apply to outline first then glaze from the wet edge for a uniform coat on flat, horizontal pieces and tiles. Gently thump when section is filled to further flatten the glaze coat. More accurate control can be achieved by:

1. Squeezing the bottle slightly before turning the tip down.
2. Releasing slightly after the bottle is tip down (a vacuum is created which holds the glaze back)
3. Squeeze to apply with superior control as glaze flow ceases almost immediately when pressure is released
